

WeRateDogs Insights for Dogs' Lovers

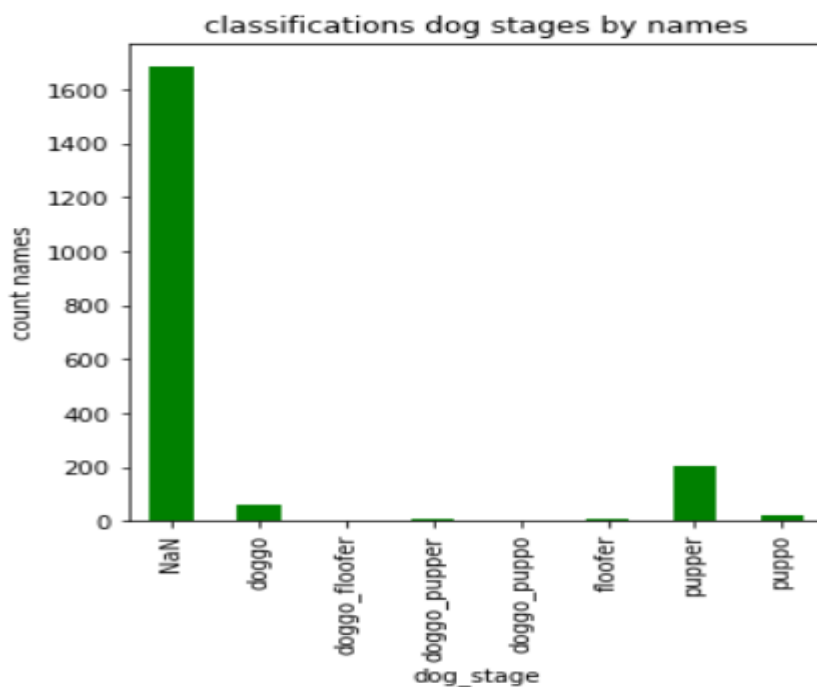

First Visualization:

First visualization shows the data of rating from archive table and the rating values are represented by rating_numerator column and data values are represented by timestamp column.

In this visualization I used the first 10 values in archive table.

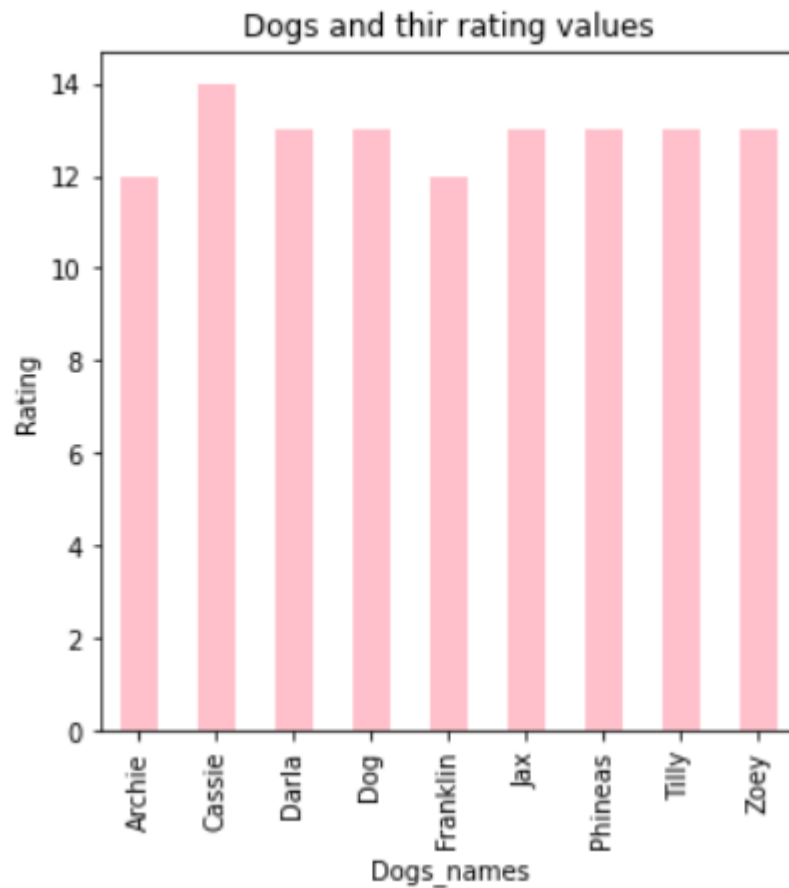

Second Visualization:

Second visualization shows how many dogs that belong to each dog stage.

I used name column in archive table to present dogs numbers dog stage.

Third Visualization:

This visualization shows the rating for the first 10 dogs in archive table.

I used rating_numerator column in archive table to represent the rating values and name column to represent dog names.
